

Queries regarding Matching Code:

1. What are Salt flag and Quantity flag for?
2. Code giving error while running on Sanyog Distributor Data, which was caused by blank brand name in master sku file, was this rectified in the latest version?
3. The line - `df_distributor['brand'] = df_distributor['brand'] + ' ' + df_distributor['pack']`, was giving zero matches (Exact and Partial), was this rectified as well in the latest version?
